

ABSTRACT

- Process and device for aiding the driving of a vehicle running over the ground.

- The device (1) comprises a means (2) for determining at least the current speed v_0 of the vehicle, a means (3) for determining a value acc corresponding to a deceleration of said vehicle, a calculation means (4) for calculating the distance df to be traveled on the ground by the vehicle in order to reach a particular speed v_f by using the expression $df = (v_0^2 - v_f^2)/(2 acc)$, and a means of presentation (7) for presenting this distance df to a driver of the vehicle.
